Hello,

I am here for Renesas MCU, Here is an low-cost inverter project request for a chip meets

AD:10*10bit or 10*12bit

FLASH > =128k

RAM >=8k

>= 20MIPS

6*PWM (for AC motor drive)

>= 1UART

35 GPIO at least

I am wondering if your H8S Tiny 80-pin can do above espeically for PWM funtion

thank you!
